Re: Structural Repair Work at St. Joseph's Hospital

To whom it may concern,

Heritage Restoration Inc. (HRI) has completed two structural rehabilitation projects for The St. Joseph's Hospital in Hamilton during my time as a Project Manager here. They were awarded the tender for expansion joint and waterproofing repair (completed in 2016), and the drainage repair project at our facilities loading dock (completed in 2017).

Working with HRI has been an altogether enjoyable experience. They are safe, courteous of hospital employees and patients, and always diligent in their work. Their management team is professional, responsive and experienced. They were quick to act on any items and provided feedback as requested.

As a company, HRI has always had the flexibility to meet a tight time frame, while completing additional work encountered along the way. In both instances we were impressed with how efficient and organized HRI was in completing their work.

We would not hesitate recommending Heritage Restoration Inc. to any owner requiring the same type of work to be completed.

Sincerely,

John Sachs B.Sc.Arch
